

Digital Advancement for All

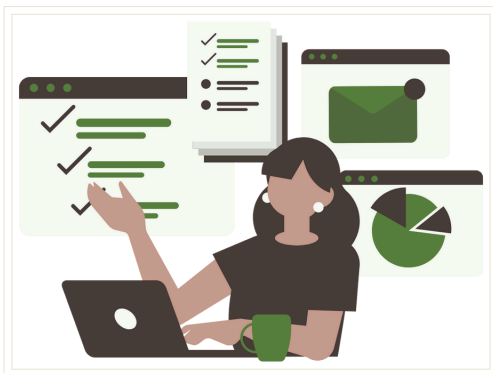

CUSTOMIZED TECHNOLOGY PLAN

OVERVIEW

Businesses need support in identifying challenges in order to advance technology in their operations. In some cases, businesses may already know what the issues are and require support in determining how to get there.

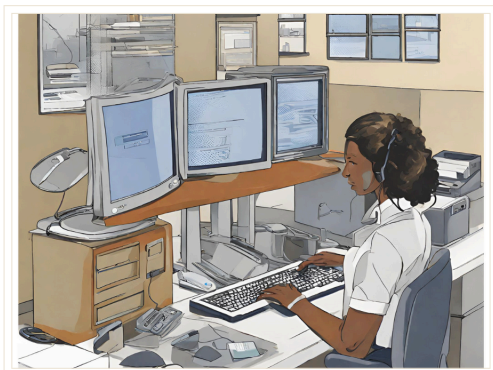

The customized technology plan provides an opportunity for organizations to turn their data and information into a roadmap of success through technology - whether they know where to start or not.

COMPONENTS

The technology plan will develop a long-term technology strategy centered on software and hardware needs, guidance on user-friendly staff training, as well as additional recommendations relevant to business needs.

Essential to the design of this plan is the inclusion of staff who will be most impacted by potential solutions to inform a clear vision of how recommendations can be implemented and evolved over time.

ESTIMATED TIMELINE

This is ideal for companies who know their technology needs and have already conducted a digital tool assessment. If needed, DAFA is both prepared and happy to conduct a needs assessment and a technology plan!

Plan development is dependent on long-term goal(s) of the client - and can be as simple (or in-depth) as desired. [Connect with us](#) to schedule a consultation and take one step closer to maximizing technology for your business!
