

Digital Advancement for All

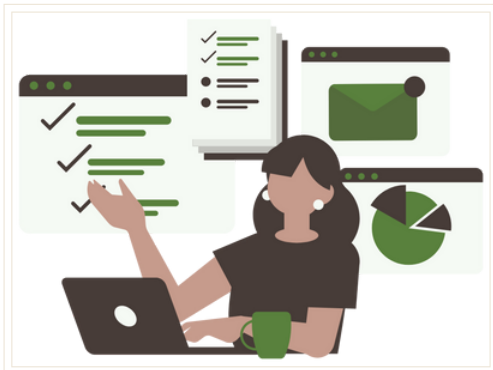

DIGITAL TOOLS ASSESSMENT

OVERVIEW

Due to resource dependency, many nonprofits underutilize or cannot utilize technology that's currently within their business operations.

DAFA conducts a digital tools assessment to understand current practices and challenges that exist within the business. This assessment looks at how these practices could be strengthened and improved, as well as identify any gaps in leveraging digital tools to achieve successful business growth.

COMPONENTS

Through a series of surveys, staff interviews and business observation, DAFA will produce an individualized assessment that highlights how current usage of technology and provide insight into tech gaps caused or influenced by the under and non-utilization of digital tools.

ESTIMATED TIMELINE

Clients looking to strengthen their use of technology for long-term sustainability will find the digital tools assessment a perfect starting point to achieve this goal.

Completion of this assessment is dependent on the complexity and long-term goal(s) of the client - and can be as simple (or in-depth) as desired. Connect with us to schedule a consultation and take one step closer to maximize the use of technology for your business!
